WEB DEVELOPMENT ACTIVITY-BASED LEARNING (ABL) ASSIGNMENT

Website Design and Development – Three Case Studies

NAME	M. RAMYA LAHARI
ROLL NUMBER	26000955
BRANCH	CSM
SECTION	2

SELECTED 3 CASE STUDIES

- 1. Gaming and Esports Community Website
- 2. Community Service Project Website
- 3. Bakery and Cake Shop Website

Prepared as a web development activity using HTML and CSS.

Introduction

Web development is the process of creating websites using technologies such as HTML and CSS. HTML provides the structure and content of a webpage, while CSS controls its colours, layout, spacing, typography and responsive appearance. This assignment presents three different website concepts and shows screenshots of the webpages developed for each case study.

Objectives

- To understand the basic structure of a webpage using HTML.
- To apply CSS for colours, typography, spacing, cards, navigation bars and page layouts.
- To design user-friendly webpages for different purposes and audiences.
- To organize information into clear sections such as Home, About, Activities, Products and Contact.
- To practise creating responsive layouts that can adapt to smaller screens.

Technologies Used

Technology	Purpose
HTML5	Creates the page structure, headings, paragraphs, navigation, cards, tables and links.
CSS3	Styles colours, backgrounds, typography, spacing, borders, hover effects and responsive layouts.
Basic JavaScript (where used)	Displays sample alert messages when demonstration buttons are clicked.
Web browser	Runs and displays the completed HTML webpages.

Note: The screenshots show the current front-end designs. Features such as real tournament registration, volunteer sign-up, payments and order processing would need further development.

Case Study 1: Gaming and Esports Community Website

GameZone Esports is a gaming community webpage designed for players who want to explore games, discover tournaments and view featured teams. A dark background with purple and cyan accents gives the website a gaming-inspired appearance.

Objectives

- Present popular game categories in a clear layout.
- Display sample tournament dates and prize information.
- Show featured teams and contact information.

Main Features

- Navigation links for Home, Games, Tournaments, Teams and Contact.
- Game cards with icons, descriptions and Explore buttons.
- Tournament table and featured team cards.
- Responsive layout for smaller screens.

Website Screenshots

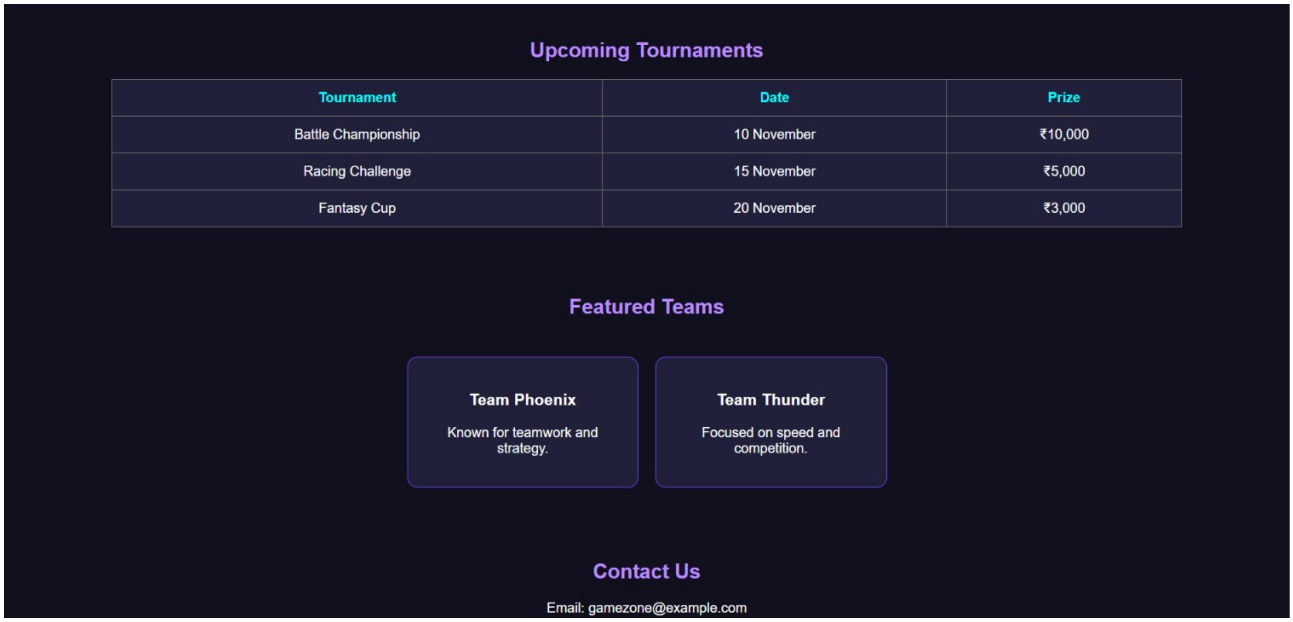

Figure 1.2: Tournament schedule, featured teams and contact section.

Case Study 2: Community Service Project Website

Helping Hands is a community service webpage that presents activities intended to support people and improve the local community. Its green colour palette represents growth and care, while orange buttons highlight key actions.

Objectives

- Introduce the community project and its purpose.
- Present service activities such as food donation, education support and environmental work.
- Organize a sample project timeline and contact information.

Main Features

- Home and About sections describing the project.
- Activity cards for Food Donation, Education Support and Green Community.
- Project timeline and expected outcomes table.
- Get Involved section with a sample volunteer-interest button.

Website Screenshots

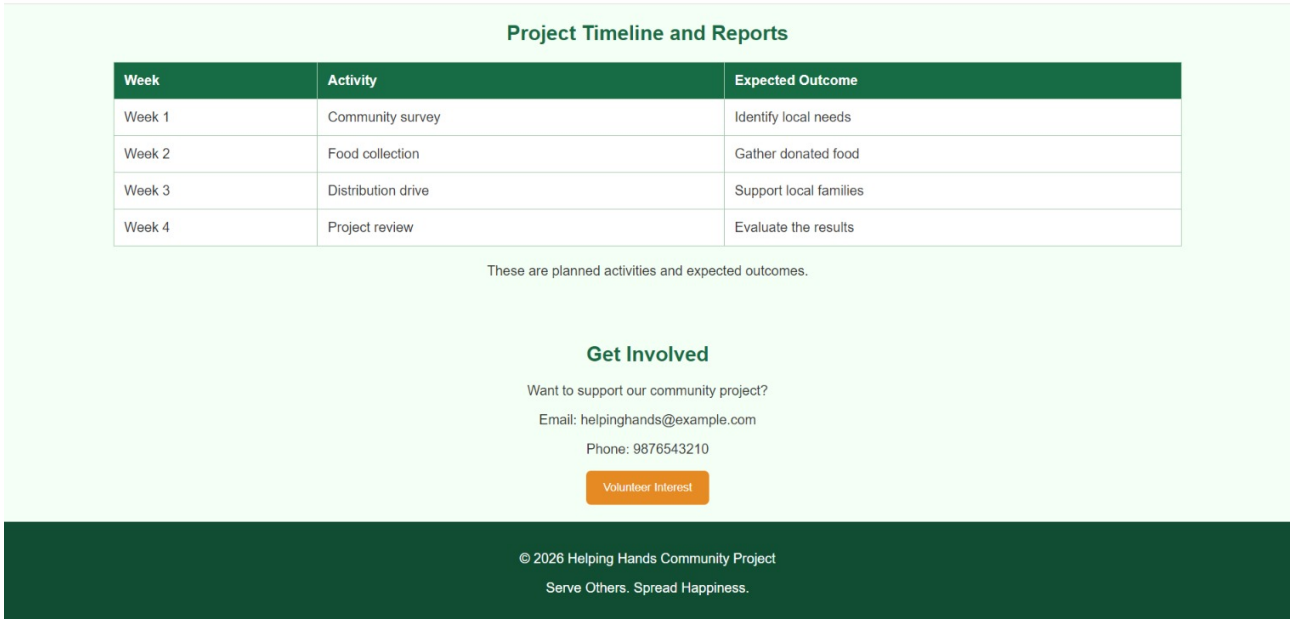

Figure 2.2: Project timeline, reports and Get Involved section.

Case Study 3: Bakery and Cake Shop Website

Sweet Treats Bakery is a product-display webpage for a bakery. It uses a pink and white colour scheme to create a friendly look and presents cakes, cupcakes, cookies and pastries with sample prices.

Objectives

- Display bakery products and their prices.
- Highlight special offers and custom cake availability.
- Provide store contact information and opening hours.

Main Features

- Navigation links for Home, Products, Offers and Contact.
- Product cards with food icons, descriptions, prices and Order Now buttons.
- Special offers section and store contact details.
- CSS hover effects and a layout that wraps product cards on smaller screens.

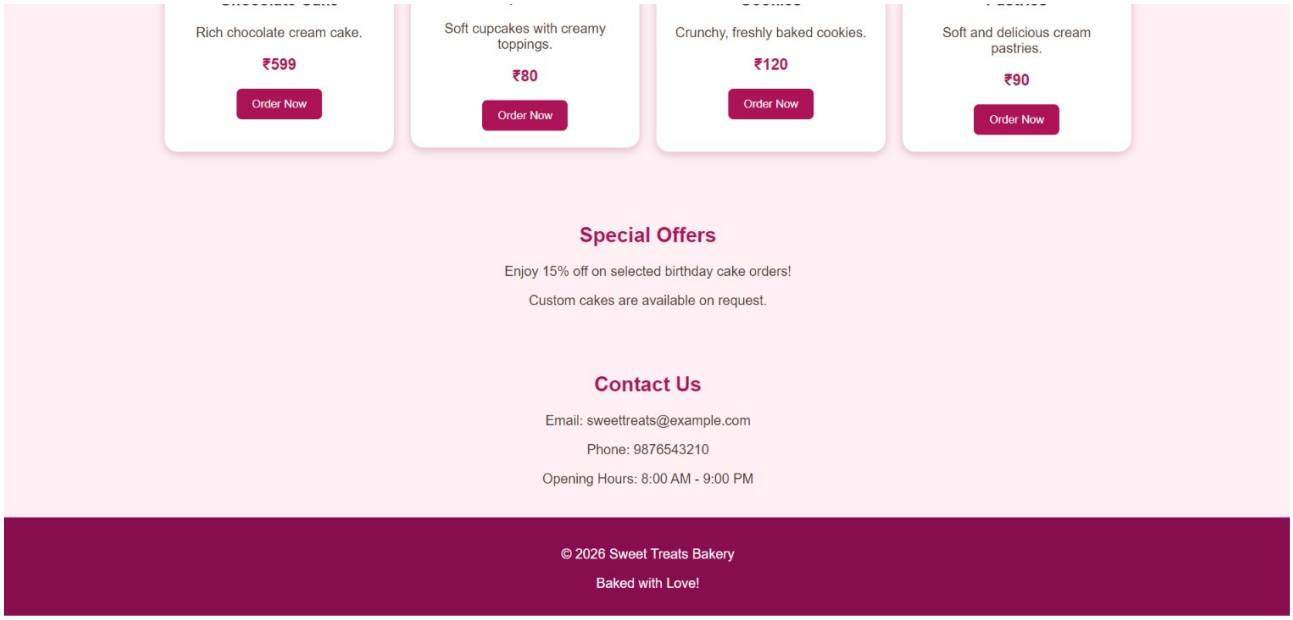

Figure 3.2: Product prices, special offers and contact information.

Conclusion

The three case studies demonstrate how HTML and CSS can be used to create webpages for different purposes: gaming and esports, community service, and a bakery shop. Each design uses a suitable colour scheme, navigation, structured sections and cards to present information clearly. This activity helped practise webpage structure, styling and responsive layout design.

Future Improvements

- Add real images and links where required.
- Connect forms and buttons to a backend or suitable JavaScript functionality.
- Test the webpages on different screen sizes and browsers.
